- Chemical Reactions and Equations**
- Energy and Its Changes**
- Forces and Motion**

Each of these areas is crucial for building a comprehensive understanding of physical science at the Grade 11 level.

Matter and Materials

States of Matter and Their Properties

The memo discusses the three primary states of matter: solids, liquids, and gases. Key points include:

- Solids:** Fixed shape and volume; particles are closely packed in a regular pattern; vibrate in fixed positions.
- Liquids:** Fixed

volume but indefinite shape; particles are close but can move past each other, allowing flow. Gases: Indefinite shape and volume; particles are far apart, moving randomly at high speeds. Practical Tip: Remembering the particle arrangements helps explain properties like compressibility and fluidity. Changes of State: Melting: Solid to liquid; occurs when particles gain enough energy to overcome fixed positions. Vaporization: Liquid to gas; includes boiling and evaporation. Condensation: Gas to liquid; particles lose energy. Sublimation: Solid directly to gas; e.g., dry ice. Deposition: Gas directly to solid; e.g., frost formation. Key Formulas: Latent Heat: $Q = mL$, where Q = heat energy, m = mass, L = latent heat. Atomic Structure and Periodicity: Atomic Models and Subatomic Particles: The memo revisits the evolution of atomic models, from Dalton's billiard ball model to modern quantum mechanical models. It emphasizes understanding: Protons: Positively charged, found in nucleus. Neutrons: Neutral, found in nucleus. Electrons: Negatively charged, orbit nucleus in shells. Atomic Number (Z): Number of protons; defines element. Mass Number (A): Total protons and neutrons. Electron Configuration and Periodic Table: Electrons occupy shells or energy levels: 2, 8, 18, 32, etc. The arrangement influences chemical behavior. Elements in the same group have similar valence electrons, resulting in similar chemical properties. Trends across periods: Atomic radius decreases across a period. Atomic radius increases down a group. Electronegativity and ionization energy increase across a period. Periodic Table Layout: Groups: Vertical columns (1-18). Periods: Horizontal rows (1-7). Tip: Use periodic trends to predict element behaviors in reactions. Chemical Bonding and Molecules: Types of Chemical Bonds: Ionic Bonds: Formed when electrons are transferred from metal to non-metal; result in charged ions. Covalent Bonds: Sharing of electrons between non-metals. Metallic Bonds: Delocalized electrons in metals; responsible for conductivity. Molecular Structures and Properties: Simple molecules (e.g., H_2 , O_2) have covalent bonds. Ionic compounds (e.g., NaCl) form crystalline lattices. The shape of molecules affects their physical and chemical properties. VSEPR Theory: Used to predict molecular shapes based on electron pair repulsions. Chemical Reactions and Equations: Types of Chemical Reactions: Combination (Synthesis): Two or more substances combine (e.g., $2H_2 + O_2 \rightarrow 2H_2O$). Decomposition: Compound breaks into simpler substances (e.g., $2H_2O \rightarrow 2H_2 + O_2$). Displacement: Element displaces another in compound (e.g., $Zn + 2HCl \rightarrow ZnCl_2 + H_2$). Redox Reactions: Involves oxidation and reduction. Balancing Chemical Equations: Use inspection method to balance atoms on both sides. Ensure mass and charge balance. Example: Balance $C_3H_8 + O_2 \rightarrow CO_2 + H_2O$: Carbon: 3 on left; 3 on right. Hydrogen: 8 on left; 2 on right, so put 4 H_2O : $C_3H_8 + O_2 \rightarrow 3CO_2 + 4H_2O$. Oxygen: $2 \times 3 + 4 = 10$ on right; so O_2 molecules: $O_2 = 5$. Energy and Its Changes: Forms of Energy: Kinetic Energy: Energy due to motion. Potential Energy: Stored energy due to position or configuration. Thermal Energy: Internal energy related to temperature. Law of Conservation of Energy: Energy cannot be created or destroyed, only transformed. During chemical reactions, energy is either absorbed or released. Energy Calculations in Reactions: Enthalpy change (ΔH) indicates heat absorbed or released. Exothermic reactions: Release heat ($\Delta H < 0$). Endothermic reactions: Absorb heat ($\Delta H > 0$). Forces and Motion: Newton's Laws of Motion: First Law: An object remains at rest or in uniform motion unless acted upon by an external force. Second Law: $F = ma$; force equals mass times acceleration. Third Law: For every action,

there is an equal and opposite reaction. Types of Forces: Gravitational Force: Attraction between masses. Frictional Force: Opposes motion. Normal Force: Perpendicular to surfaces. Applied Force: Force applied by an external agent. Motion and Velocity: Distance-time graphs display motion. Velocity = displacement/time. Acceleration: change in velocity over time. Practical Tip: Use the equations of motion to solve problems involving uniformly accelerated motion: $v = u + at$, $s = ut + \frac{1}{2}at^2$, $v^2 = u^2 + 2as$. Using the Memo Effectively: Past Exam Questions: The memo provides solutions to previous papers, aiding in understanding question patterns. Formulas and Constants: Memorize key formulas and constants for quick recall. Conceptual Clarity: Focus on understanding concepts rather than memorizing facts.
